

Gary Bent

I am a physics and chemistry teacher at E.O. Smith High School in Connecticut that is located next to the University of Connecticut. I have been teaching here for nine years. Before that I was the Assistant Head of the Physics Department at UConn. I retired from that position after 22 years and went into real teaching. While at UConn, I was an active researcher in theoretical chemical physics. One of the areas I specialized in was atmospheric chemistry. I have been following the science of climate change for over 30 years, and I have become increasingly concerned about the lack of action to do anything serious to counter it. Thus I am happy there is such a thing as Lifelines. I hope we can make a difference.

Recruitment

12.21.10: I have 7 people and two more who have expressed interest. This is a little tougher than I expected.
