

William Richards

I am very excited to be working with everyone. I am currently teaching Environmental Science and Biology. I am teaching in San Luis, Arizona which is a border town in the corner of Arizona, California and Mexico. I am trained as a wildlife biologist and have moved all over the country working as a wildlife tech, taking jobs from scuba diving for the removal of aquatic invasive species to working as a wildlife technician in Yakutat, Alaska. I enjoy all outdoor activities, including skiing, hiking and kayaking. I love to teaching and look forward to bringing what I learn here to the classroom.

Reflections

sept. 7

I thought this meeting was very insightful. I had several questions on our exact duties and also what our communities were going to be

accomplishing. These questions have been resolved and I have a much better understanding of my responsibilities. I am looking forward to recruiting new members and am very excited about this project.

I also plan on trying to get at least one non – science teacher in my group so that there will be some diversity within the group.

I like the idea of development in the way of powerpoints and experts on certain topics.
